

Press release

15 September 2005

## **New renewable energy consultancy business opens in Denmark**

Make Consulting opens for business today.

MAKE Consulting will provide consultancy services targeting companies and organisations with an interest in renewable energy. MAKE Consulting's primary focus will be commercial and marketing services aimed at the wind turbine industry – from analysis and strategic observations to seminars and presentations.

In addition to supplying consultancy services, MAKE Consulting will release quarterly market reports identifying significant conditions in the industry, along with a number of ad hoc analysis.

MAKE Consulting is based in Århus, Denmark, where the company's first employees are already working on initial projects. MAKE Consulting also draws on an extensive international network.

The choice of Århus reflects the fact that Denmark, and particularly the western region, has developed into a global knowledge and competence centre for wind energy – the most rapidly growing renewable energy source. The future of wind energy looks very promising, and MAKE Consulting therefore aims to assist companies in developing their position on the market.

MAKE Consulting has been founded by Torben Bjerre-Madsen and Morten Keller, both of whom have extensive experience from the wind turbine industry. Torben Bjerre-Madsen was Deputy CEO of Vestas Wind Systems up until last autumn, and CEO of NEG Micon prior to that. Morten Keller has just left a position as a wind energy analyst for Nordea Bank. He has also served as IR Manager at Vestas Wind Systems, as well as spending many years at NEG Micon with responsibility for business development, marketing and investor relations.

Morten Keller will be responsible for day-to-day management at MAKE Consulting, while Torben Bjerre-Madsen will be serving as Chairman of the board.
