Public policy can enable the development of utility-scale wind power in key markets.

Important areas include framework-related policies that determine national or regional targets for renewable energy and define market mechanisms, financial incentives and subsidies. Execution-related policies that govern infrastructure in terms of grid connection, transmission and distribution as well as the planning and permitting of wind farms also affect wind power development.

For 2011 global policy opportunities exceed risks, but with great variation across regions.

The Global Policy Horizon examines existing regulatory framework and expected near-term policy activity in the top-15 markets for wind power based on 2011-2013 demand projections. The research assesses the four key policy areas that may impact wind power development: renewable energy targets, incentives, transmission and permitting.

THE GLOBAL POLICY HORIZON IS AVAILABLE TO SUBSCRIBERS OF OUR PREMIUM RESEARCH SUBSCRIPTION PACKAGE.
